EMERGYS

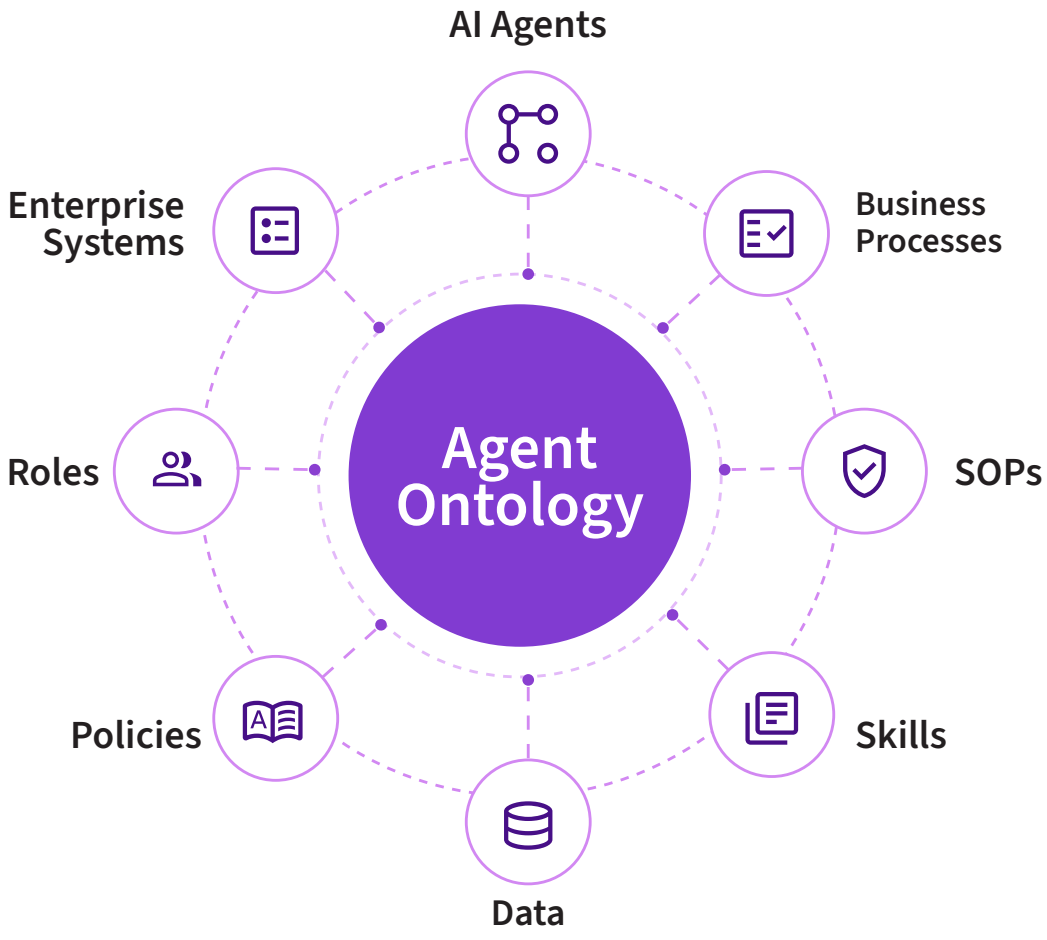
Agent Ontology

The Enterprise AI Operating System

Build. Govern. Orchestrate. Scale.

Move from isolated AI assistants to a coordinated, enterprise-ready digital workforce.

Agent Ontology provides the foundation to design, deploy, manage, and scale AI agents across business processes, enterprise applications, data and the teams - with the control, context, and operational visibility enterprises need.



Enterprise-Grade Governance

RBAC, guardrails, policies, approvals, and auditability.

Multi-Agent Execution

Coordinate specialized agents across complex business processes.

Enterprise Integration

Work across SAP, ServiceNow, APIs, data, Salesforce, and business applications.

Lifecycle & Operational Intelligence

Manage agents from design and deployment to monitoring, optimization, and retirement.

EMERGYS

One Enterprise Foundation

Everything Agents Need to Execute.

Enterprise agents need more than models and prompts. They need the skills, context, approved procedures, controlled access, and human oversight to execute real business processes.

Securely connect agents with enterprise applications, APIs, and tools through centrally managed access policies and controls.

API Governance

Human-in-loop Workbench

Route approvals, exceptions, and policy-driven decisions to the right business users with complete auditability.

SOPs Repository & Execution Engine

Store, version, govern, and execute approved SOPs. Reuse securely across multiple agents & teams.

Context Management

Provide agents with business context, records, history, documents, and process state while maintaining secure data boundaries.

Skill Library

Build reusable business skills once and make them available across agents and processes.

Agent Registry

Discover, configure, version, classify, and manage enterprise agents across their lifecycle.

Enterprise Controls

RBAC, guardrails, policies, monitoring, audit, & compliance at every layer.

Secure by Design | Governed by Policy | Built for Scale

EMERGYS

From Individual Agents to Coordinated Business Execution

The value of enterprise AI is not another chatbot. It is the ability for specialized agents to work together across an end-to-end business process, using shared skills, context, SOPs, human approvals and enterprise systems.

01
Invoice Agent
Interprets incoming invoice documents.

02
Vendor Agent
Validates supplier and master data.

03
Risk Agent
Performs compliance and fraud checks.

04
SAP Agent
Posts approved transactions into the ERP.

05
Human-in-the-Loop
Handles only policy-driven exceptions and approvals.

Shared Foundation for Every Execution

Shared Context | Skills | SOPs | Policies | APIs | Enterprise Systems

Faster Process Automation
Reduce manual cognitive work across complex processes.

Reusable AI Capabilities
Reuse agents, skills, SOPs, and APIs across business functions.

Controlled Execution
Apply policies, approvals, guardrails & permissions, at every stage.

Continuous Optimization
Use execution data and analytics to improve agent effectiveness.

EMERGYS

Scale AI
with Control, Visibility & Confidence

As the number of AI agents grows, enterprises need visibility into what agents are doing, what they can access, where they fail, and when human intervention is required.

Agent Ontology brings execution intelligence, governance, & lifecycle visibility into one operational experience.

Five Dimensions of Controlled Scale

Monitor Performance

Track agent health, execution volume, workload distribution, business KPIs & process performance, in

Detect Issues & Deviations

Identify failures, bottlenecks, risks, & deviations early to keep operations on track.

Ensure Compliance & Auditability

Every decision, API call, approval, and transaction is fully traceable for governance and compliance.

Optimize & Improve

Analyze outcomes and bottlenecks to continuously improve business impact and agent effectiveness .

Scale with Governance

Manage ownership, permissions, versions, lifecycle status, and ongoing optimization as the agent estate grows.

Build Your Enterprise Agent Framework

Define how your AI agents connect, collaborate, and operate across your enterprise.
