

Is maintaining good security hygiene a challenge? You are not alone.

Security hygiene and posture management are key to preventing cyber-attacks and breaches, but with a growing attack surface and limited resources, many organizations have difficulty keeping up. A recent research study from ESG of nearly 400 security and IT professionals quantified some of the challenges.

Management is Manual

Despite most organizations scanning for vulnerabilities daily or weekly, 73% are using spreadsheets to manage assets or their attack surface.

Prioritization is a struggle

Security hygiene and posture management are key to preventing cyber-attacks and breaches, but with a growing attack surface and limited resources, many organizations have difficulty keeping up. A recent research study from ESG of nearly 400 security and IT professionals quantified some of the challenges.

70%

Have more than ten security tools to manage security hygiene and posture

61%

Find it difficult to prioritize the right actions that can have the biggest impact on risk reduction

57%

Don't always know which assets are business-critical

Automation is lacking

Security hygiene and posture management are key to preventing cyber-attacks and breaches, but with a growing attack surface and limited resources many organizations have difficulty keeping up. A recent research study from ESG of nearly 400 security and IT professionals quantified some of the challenges.
