

The Future of Risk Management

Here's how ServiceNow can help you transition from legacy governance, risk, and compliance to thoroughly modern integrated risk management.

The Past

Closed, proprietary architecture

Compliance-driven content

Technical, control-based design

Ubiquitous, meaningless market definition

Rigid features and functions

Technical buyers / influencers

Internally driven, departmental usage

Integrated Risk Management with ServiceNow

Open, scalable, cloud-based, fully integrated on the Now Platform.

Risk-focused using automated risk indicators and scoring to identify high or emerging risks

Business oriented, process based workflows, and context to analyze and treat risk based on business impact

Targeted and purposeful, addressing business risk within the organization and throughout the 3rd party ecosystem

Configurable, flexible, and easy-to-design workflows, reports, and more

Driven by business leaders (CISO, CRO, CIO, CFO, Legal, Audit, etc.)

Ecosystem-driven, with cross-functional workflows and monitoring, APIs for partner apps and 3rd parties, and the ServiceNow Store
